

RESILIENT SOUND ISOLATION CLIPS

MetroFlex Resilient Sound Isolation Clips were designed to decouple drywall from wall or ceiling structures. MF-RSIC clips are easy to install by simply being screwed to existing wood or steel stud/joists. Hat Channel is held in place by MF-RSIC clips spread no more than 48" apart. Drywall is then installed on top of the hat channel by self drilling metal screws. MetroFlex Resilient Sound Isolation Clips can reduce noise transfer between 75% and 100%. MetroFlex MF-RSIC clips have been tested to be part of assemblies that have STC Ratings of up to 64!
